Waterproof Housings for Marine Electronics

PedestalPods for Bass Boats

PedestalPods are better than bracket mounting. Very sturdy and secure, yet clean and attractive, this mount provides protection of your fishfinder/chartplotter from the harshest of wet boating conditions. PedestalPods provide the convenience of easily reaching and controlling the fishfinder/chartplotter while providing added security with protection from theft.

PedestalPods position your fishfinder/chartplotter at 20" off the deck and located near the bow and at a 45-degree angle for ease of viewing while fishing. This allows the user to easily reach and access the fishfinder/chartplotter for changes to range, zoom or even control the trolling motor.

PedestalPods are manufactured with a double gasket system that provides an excellent watertight seal keeping spray off the electrical connections on the back of your fishfinder/chartplotter assuring reliability and longevity of your marine electronics.

Your fishfinder/chartplotter is easily flush mounted into the pre-cut face of the NavPod. The heavy duty, powder coated aluminum pedestal tube is 3" in diameter with a 5" round base and has a large 1.75" opening providing plenty of room for running wires and connectors internally for a very clean look and provides protection for wires and electrical connectors from water intrusion, UV exposure or damage from just getting kicked or snagged and ripped out of their sockets.

NavPods come with a security wrench and nickel chrome-plated stainless steel tamperproof screws for protection from theft.

There are pre-cut models available for 7", 9" and 12" LCD displays from all major marine electronic manufacturers.

NAVPOD®

Waterproof Housings for Marine Electronics

PowerPods Carbon Series

PowerPods are better than bracket mounting. Sturdy and secure, yet clean and attractive, PowerPods position your fishfinder or chartplotter at a 20-degree viewing angle. PowerPods provide the clean look of flush mounting with the advantages of a swivel base.

PowerPods are now available in two color options. Black carbon and high gloss white. Constructed out of durable ABS like all Gen3 PowerPods, these new black carbon models will also have the same high gloss finish and UV stability.

NavPods are made to protect your Marine Electronics from the harshest of wet boating conditions. Your fishfinder or chartplotter is easily flush mounted into the pre-cut front of the NavPod. All NavPods are manufactured with a double gasket system that provides an excellent watertight seal. PowerPods keep the spray off the electrical connections on the back of your Marine Electronics assuring years of reliability.

NavPods come with a security wrench and nickel chrome-plated stainless steel tamperproof screws for protection from theft. There are pre-cut models available for all 7", 9" and 12" LCD displays from all major marine electronic manufacturers.

Convenience. Protection. Security.

Usable Face

If you plan to select an un-cut NavPod we provide “usable face” as a guideline. “Usable Face” is the available flat surface on the front of a NavPod. The overall height and width of the electronics needs to be less than the height and width of the usable face.
