

c-pod[®]

www.c-pod.com

C-pod's philosophy is "carefree boating". You use your boat a few months a year and when you do you want everything to work! Unpleasant surprises can easily be avoided if you find out about them in time. C-pod provides you this

possibility, which allows you to spend less time on land and more at sea.

MORE THAN JUST A BOAT ALARM

Why C-pod?

Do you worry about:

- Your boat being stolen?
- If the battery has been discharged or shore power has been disconnected?
- If your boat is taking on water?
- Burglary?
- Your outboard engine, scooter or dinghy being stolen?
- The temperature approaching the freezing point?

And you wish you could:

- Locate your boat wherever you are.
- See the history where your boat has traveled.
- Manage alarms and warnings to people closest to your boat.
- Turn on or off electronic devices onboard (i.e. heater or fridge.)
- Reduce your insurance premium.
- Manage everything above from an app on your smartphone.

Then you should install a C-pod!

How does it work?

C-pod operates globally and communicate with our servers via GPRS and SMS over the GSM cellular network. The C-pod system knows exactly where it is located via GPS. The server-based system enables an active communication with your C-pod around the clock which enables you to:

- Always observe route history in a map view.
- Automatic software upgrades.
- Receive communication warning if the GSM network is unavailable.
- Receive SMS and/or E-mail until you shut it off if an alarm is triggered.
- The number of alarms and warnings recipients are unlimited and you may tailor the information they receive.

You turn on/off your C-pod via SMS command, an on board activation button or via the C-pod app on your smartphone. There is also a remote control available as an accessory.

Along with your C-pod, you get a personal web portal account where you can edit the settings via computer, smartphone or tablet.

C-pod features!

Geofence alarm

The C-pod continuously monitors the boat's position through the built-in GPS and sends an alarm if it moves more than 200m.

Sensor alarms

Add up to 12 sensors to detect intrusion, water level, smoke or other hazards onboard.

Battery disconnect alarm

If the external power is cut the C-pod sends an alarm before converting to the internal back-up battery.

Battery level warning

The user can set a battery voltage threshold to get a warning when it is time to charge the boat's batteries or to detect when shore power is not available.

Communication warning

The system actively monitors each C-pod unit continuously. If the unit is unable to connect to the GSM network (i.e. GSM jammer) a notification is sent to the user.

Complete server back-end solution

C-pod relies on our servers which sends you SMS alarms continuously until you reset it. You will never miss an alarm!

Service

C-pod Security Systems customers have high demands and expects a high level of service. Therefore the following is always included in our subscription:

- Free support 9-17 (CET) all weekdays by e-mail and phone.
- Automatic software upgrades for optimum safety and performance.
- Free iPhone, iPad, Windows and Android app.
- Unlimited global coverage. This allows you to monitor your boat from another country without expensive roaming charges.

There are three different subscriptions:

- Month by month (rolling 12-month contract)
- Prepaid 12 months
- Prepaid 24 months
